# LEG LUVERLINESS

However, if you're a bit oldsken about this hot molten wax, shave your legs once a week. You could treat yourself to an electric razor — Remcon Ladies Razor. Thats £8 11s. 10d. Or just as effective is the little Nymph razor, 4s. 6d or Lady Personna, 7s. 9d., only they mean more work.

# FOR THAT REALLY SHARP FINISH

Many engineers, if told that the razor blade was an essential tool in the electrical industries, would probably make some cutting remarks about electric razors in reply. However, Ever-Ready Personna has recently conducted a survey which revealed the widespread use of razor blades and a number of novel applications.

These applications vary from cleaning paint from terminals, cable slitting and stripping to parting interleaved coils and trimming loudspeaker cones.

## for every purpose

The blades are available in various fashions—single edge, double edge, injector blades and even without back or perforation in sharpened strip or coil form.

Blade life varies, of course, with its use. In the electrical industries it has been estimated at up to 3000 operations per blade, although where the cutting of wax laminate paper is the task in question over 5 million operations have been achieved.

An industrial blades division, offering a free technical advisory service, has been formed by Ever-Ready Personna, and inquiries should be addressed to Wellington House, 6/9 Upper St. Martin's Lane, London WC2.
